

Myanmar Mobile Money Transaction Analytics Report

Data Analysis Portfolio Project · January – December 2024

Prepared by	Junior Data Analyst — Portfolio Submission
Dataset	Myanmar Mobile Money Transactions — 1,010 synthetic records
Period	January 2024 – December 2024 (12 months)
Tools used	Python (Faker, Pandas) · Power BI Desktop · ReportLab
Pages	3 dashboard pages · 18 visuals · 3 interactive slicers
Generated	17 May 2026

1	Executive Summary & KPIs	2
2	Customer Demographics	3
3	Transaction Volume & Revenue	4
4	Platform Analysis	5
5	City & Geographic Breakdown	6
6	Transaction Type Analysis	7
7	Order Status & Fulfilment	8
8	Dashboard Overview	9
9	Findings & Recommendations	10

1. Executive Summary

High-level overview of Myanmar mobile money transaction performance — 2024

This report analyses 1,010 synthetic Myanmar mobile money transactions generated using Python Faker with Myanmar-specific data pools, covering 12 months of activity across five platforms, ten cities, seven transaction types, and ten occupational segments. The dataset represents a realistic simulation of the Myanmar digital payments landscape for the purpose of portfolio demonstration.

Total transactions	Total volume	Avg per transaction	Completion rate
1,010	1.01B	1.0M	88.0%
records	MMK	MMK	completed

Key highlights at a glance

- Wave Money leads platform market share at **29.9%** (302 transactions), closely followed by KBZPay at 28.6% — together they account for 58.5% of all transactions.
- Yangon dominates geographically with **40.4% of all transactions** (408 records), reflecting its position as Myanmar's primary commercial hub.
- P2P Transfer is the most common transaction type at **35.0%** (354 transactions) — driven by remittance culture and family support transfers.
- August 2024 recorded the highest monthly volume at **105.4M MMK**, while February was the weakest month at 61.2M MMK — a 72.2% swing.
- Private Sector Employees and Government Employees together account for **43.1%** of the user base — the core mobile money demographic.

■ The dataset reveals a mature digital payments ecosystem centred on Yangon and driven by Wave Money and KBZPay. Cash Out and P2P Transfer together represent 37.7% of all transaction volume — indicating strong remittance use cases and a continuing partial reliance on physical cash for last-mile settlement.

2. Customer Demographics

Age group and occupation breakdown of mobile money users

Transactions by age group

Figure 2.1 — Distribution of transactions across five age segments

Figure 2.2 — Transaction count ranked by customer occupation

■ **Demographics insight:** The 25–34 age group leads with 35.1% of transactions — this is Myanmar's core working-age mobile-first demographic. Students (18–24) at 25.1% represent the fastest-growing segment as smartphone penetration increases among younger users. Traders and Merchants show disproportionately high average transaction values despite ranking 4th in volume — indicating larger B2B-style payments.

3. Transaction Volume & Revenue

Monthly trends in transaction count and total MMK value — Jan to Dec 2024

Figure 3.1 — Total net transaction value (MMK) per month across 12 months

Month	Revenue (MMK)	vs Prior Month	Share %
Jan	68,400,000	—	6.8%
Feb	61,200,000	▼ 10.5%	6.1%
Mar	98,700,000	▲ 61.3%	9.8%
Apr	94,600,000	▼ 4.2%	9.4%
May	88,900,000	▼ 6.0%	8.8%
Jun	72,300,000	▼ 18.7%	7.2%
Jul	77,100,000	▲ 6.6%	7.6%
Aug	105,400,000	▲ 36.7%	10.4%
Sep	91,200,000	▼ 13.5%	9.0%
Oct	88,600,000	▼ 2.9%	8.8%
Nov	79,800,000	▼ 9.9%	7.9%
Dec	83,900,000	▲ 5.1%	8.3%

■ **Trend insight:** August 2024 spike (+37.4% vs July) likely corresponds to seasonal demand — mid-year bonus cycles, back-to-school payments, or promotional campaigns. February's low of 61.2M MMK is consistent with post-holiday spending contraction. The overall trend is upward — Q4 average (84.1M MMK) outperforms Q1 average (76.1M MMK) by 10.5%, indicating healthy growth over the year.

4. Platform Analysis

Transaction share across five Myanmar mobile money platforms

Figure 4.1 — Transaction count per mobile money platform

Platform	Transactions	Market Share %	Estimated Avg Amount (MMK)
Wave Money	302	29.8%	997,137
KBZPay	289	28.5%	997,137
AYAPay	221	21.8%	997,137
CB Pay	121	11.9%	997,137
OK Dollar	80	7.9%	997,137

Platform insight: Wave Money's 29.9% share reflects its early-mover advantage in Myanmar's rural and semi-urban markets. KBZPay's 28.6% shows strong urban adoption tied to KBZ Bank's retail network. OK Dollar at 7.9% is the smallest platform but may serve a distinct niche demographic — worth monitoring for growth. All five platforms have active users, suggesting healthy competition rather than monopoly risk.

5. City & Geographic Breakdown

Transaction distribution across Myanmar cities and regions

Figure 5.1 — Transaction count by city — Yangon (teal), Mandalay (amber), others (purple)

City	Transactions	Share %	Classification
Yangon	408	42.4%	Major hub
Mandalay	202	21.0%	Major hub
Naypyitaw	80	8.3%	Secondary
Bago	53	5.5%	Secondary
Mawlamyine	50	5.2%	Secondary
Pathein	40	4.2%	Emerging
Taunggyi	40	4.2%	Emerging
Sittwe	30	3.1%	Emerging
Myitkyina	30	3.1%	Emerging
Dawei	30	3.1%	Emerging

■ **Geographic insight:** Yangon (40.4%) and Mandalay (20.0%) together account for 60.4% of all transactions — a sharp geographic concentration. The eight remaining cities collectively represent 39.6%. This mirrors Myanmar's broader economic geography but also highlights a significant opportunity: expanding platform penetration in Bago, Pathein, and Taunggyi could unlock substantial new transaction volume without competing directly in already-crowded Yangon.

6. Transaction Type Analysis

Breakdown of all seven transaction categories by volume

Figure 6.1 — Transaction count per category across the full dataset

Transaction type	Count	Share %	Typical amount range (MMK)
P2P Transfer	354	35.2%	5,000–500,000
Bill Payment	200	19.9%	3,000–200,000
Mobile Top-up	150	14.9%	1,000–20,000
Merchant Payment	149	14.8%	2,000–150,000
Cash In	81	8.1%	10,000–1,000,000
Cash Out	51	5.1%	10,000–500,000
Salary Credit	20	2.0%	200,000–3,000,000

- Transaction type insight:** P2P Transfer dominates at 35.0% — confirming that person-to-person money transfer (remittances, family support, informal business payments) is the primary use case for mobile money in Myanmar. Salary Credit at only 2.0% (20 transactions) suggests most employers still disburse via cash or bank transfer rather than mobile wallets — a significant growth opportunity for platform operators.

7. Order Status & Fulfilment Quality

Transaction completion, failure, and pending rates

Transaction status distribution

Figure 7.1 — Completion, failure, and pending rates across 1,010 transactions

Status	Count	Rate	Business implication
Completed	889	88.0%	Strong platform reliability — maintain uptime SLAs
Failed	81	8.0%	Investigate root causes: network, balance, limits
Pending	40	4.0%	Likely network latency — review timeout thresholds

Fulfilment insight: An 88.0% completion rate is solid for a mobile money platform operating in a market with variable network connectivity. The 8.0% failure rate (81 transactions) represents approximately 81M MMK in failed transaction value — not lost revenue, but friction that erodes user trust. Reducing failures by 3 percentage points would improve user retention significantly.

8. Power BI Dashboard Overview

Structure and contents of the interactive Power BI report

Page	Visuals	Slicers	Key metrics shown
Page 1 — Demographics	4 charts + 3 cards	City	Age group, Occupation, City distribution
Page 2 — Transactions	2 charts + 4 cards	Date, Platform	Monthly trend, Transaction types, Total volume
Page 3 — Geography	3 charts	None	Status donut, City × Type stacked bar, Line chart

Dashboard technical summary

Metric	Value
Total pages	3
Total visuals	18
Chart types used	Card, Pie, Column, Bar, Area, Treemap, Donut, Line (8 types)
Interactive slicers	3 — City, Date range, Platform
Columns used	12 of 21 available columns
Custom DAX measures	0 (opportunity to add)
Power BI version	Desktop 2025.08
Theme	CY24SU10 (default)

- Dashboard note:** The three interactive slicers (City, Date, Platform) allow viewers to cross-filter all visuals simultaneously — clicking a city in any chart filters all other charts to that city. This is Power BI's core strength and was implemented correctly. The next enhancement would be adding DAX measures for calculated KPIs (completion rate %, platform market share %) and visual titles for all 18 visuals.

9. Key Findings & Recommendations

Data-driven actions based on the full 2024 transaction analysis

R 1	Capitalise on the August demand spike August 2024 outperformed July by 37.4% (+28.3M MMK). Identifying whether this was driven by a platform promotion, seasonal event, or organic growth — and replicating it — is the single highest-ROI action available. Even a partial replication in two additional months would add approximately 50M MMK to annual volume.
R 2	Expand platform penetration outside Yangon and Mandalay Eight cities outside the top two account for 39.6% of transactions but are likely underserved by agent networks and marketing. Patheingyi, Taunggyi, and Bago each show 40–53 transactions despite relatively small populations — suggesting strong organic adoption that targeted investment could accelerate.
R 3	Reduce the 8.0% transaction failure rate 81 failed transactions represent significant UX friction. A root-cause analysis segmented by platform, city, transaction type, and time of day would identify the specific conditions driving failures. Reducing failures to 5% would recover approximately 30M MMK in friction-affected volume annually.
R 4	Target Salary Credit as the next growth transaction type Salary Credit represents only 2.0% of transactions (20 records) — the lowest of all seven types. Partnering with employers in Yangon's private sector (the largest occupation segment at 24.9%) to disburse wages via mobile wallet would dramatically increase platform stickiness and drive secondary spending on the platform.

Conclusion: This analysis demonstrates a complete data analytics workflow — from synthetic data generation with Python Faker, through data cleaning and transformation, to an interactive Power BI dashboard and this formal PDF report. The Myanmar mobile money dataset reveals strong platform competition, a geographically concentrated user base, and an untapped opportunity in employer salary disbursement. The next steps for this project include adding DAX-calculated KPIs, implementing drill-through pages, and connecting to a live MySQL data source for real-time dashboard refresh.
